FALLS TECHNOLOGY

CAPABILITY STATEMENT

Putting the power back in the hands of the mission.

Falls Technology delivers software engineering, enterprise modernization, and AI-enabled solutions supporting federal and national security missions.

WHO WE ARE

Falls Technology partners with federal prime contractors to deliver software engineering, enterprise modernization, data solutions, and technical leadership for complex government missions. Our engineers bring technical depth across software development, systems integration, data platforms, and enterprise modernization, and teaming partners receive responsive communication and direct access to company leadership.

WHY CHOOSE FALLS

Mission-focused expertise.
Engineers with hands-on experience supporting federal and national security programs, applying modern development practices to critical systems.

Engineering-led leadership.
Technical leaders who stay close to the work, communicate responsively, and hold delivery to a high engineering standard.

DISCIPLINES

- Systems Engineering
- DevOps
- Database Administration
- Software Development
- Security Engineering
- Architecture

CORE SERVICES

- Custom mission applications
- Data engineering and system integration
- COTS integration
- Human-centered UI/UX design
- Platform adoption training
- DevSecOps and process automation
- Scalable critical infrastructure design
- ATO compliance and certification support
- Custom Salesforce mission solutions
- Data visualization for better decision-making

BUILD WITH AI

AI-assisted development: LLMs accelerate coding, analysis, refactoring, and review; prototyped self-hosted, offline LLM code review in controlled environments.

Document intelligence: OCR and ETL pipelines with AI to categorize and route records, with cross-model checks and engineer review.

Engineer-led validation and controlled deployment: experienced engineers validate quality, security, and correctness; self-hosted models on controlled networks protect sensitive code and data.

HOW WE DELIVER — PROVE · DELIVER · SCALE

Prove: prototype first and earn user buy-in. Deliver: mission-first MVP, then improve with real users. Scale: automated, secure operations and architecture that grow without rework.

COMPANY DATA
